

Plantation Drive Transforms Government College of Dentistry into a Green Haven

In a commendable effort to promote environmental sustainability, the Government College of Dentistry recently conducted a highly successful plantation drive, resulting in the planting of 450 trees across the college campus.

The initiative saw enthusiastic participation from mentors, mentees, and staff members, each contributing to the green transformation by planting trees and pledging to care for them in the future. The diverse array of trees planted promises a future campus rich with fruit-bearing and large shade-giving trees.

The event was further bolstered by generous tree donations from various social groups and the forest department, underscoring the community's commitment to a greener environment.

With this initiative, the college anticipates evolving into a sprawling, eco-friendly campus, setting a benchmark for sustainability and environmental stewardship in educational institutions.
